Universidad de Zamboanga
Zamboanga City

We can save our mother earth by minimizing using of things that can harm our mother earth, for example using vehicles that can promote air pollution and using plastic bags. We can also plant trees to avoid landslide and discipline ourselves by doing improper disposal of waste.

By doing these things that I've wrote we can step by step save our environment, we can also prevent global warming. By uniting one opinion which is saving our environment with other people living in this earth we can nurture an preserve our environment to our children children.
