

How to Save the Environment

Student

Bachelor of Science in Radiologic Technology

School of Allied Medicine

Universidad de Zamboanga

Zamboanga City, Philippines

In order to save the environment, each of us should re-educate on how to dispose our garbage. There should be a symposium on every barangay or community about disposing our garbage properly.

We should recycle and reuse plastics so that it will lessen the production of plastics in big plastic companies. We should not burn plastics so that our ozone layer will not be destroyed.

Other than plastics, we also have to take care of our forest. We should stop cutting big trees so that we will not suffer like typhoons and floods that happened before like "Ondoy". It was a tragic incident that should never happen again.

We should plant more trees and take care of our environment because we are going to pass it to the next generation. If we will not take care of our environment what will possibly happen to us in the next ten years?

So I think we should reuse and recycle and take care of our environment so that we will not suffer from suns effect and strong typhoons.
