

“How to save the environment”

Agang, Ma. Angeline Faye E.
School of Allied Medicine
Universidad de Zamboanga
Zamboanga City

Our mother Earth is in the great danger. As a student. It is our responsibility to nurture and save and protect our natural resources. One simple way of doing it is to make a step for the seek of our poor environment as they said.

First, we need to separate biodegradable and non-biodegradable wastes, recyclable wastes. Second, since our supply of food is limited, we need to conserve food to eat and water to drink. Last, we must report environ criminals to authorities and punishes for abusing our natural resources. By this means, I have done my responsibility of saving our mother earth.
