

How to Save the Environment

Al-Rajhi Sariol

Bachelor of Science in Nursing

School of Allied Medicine

Universidad de Zamboanga

Zamboanga City, Philippines

To save the environment, do not do anything destructive like smoking since it is one of the causes of pollution. If one is a smoker then one should stop it to prevent pollution. Do not throw garbage anywhere rather dig a hole or a compost pit and let it decompose it. Do not cut trees to prevent flash floods and landslides and besides cutting down trees is illegal.

The environment is part of our living. A healthy environment will give us a healthy living that is why we must put attention and care to save it.
