Environment is the aggregate of surrounding, things or condition. We should maintain the calamities of our environment but now a day our environment is getting worst. Air pollutions and water pollution are examples of it. Air and water pollution can cause diseases. Water pollution can cause floods. We are now having air pollution because of the smoke from vehicles and factories. It is important to save the environment saving the environment is like saving our lives.

There's lot ways how to save the environment. As a student we can save the environment by simply not throwing our garbage any where, by cleaning the surrounding, by planting trees, stop burning plastics because it destroy the ozone layer. For the vehicles, we should also find another substitute for gasoline that will not cause air pollution. We should not also throw garbage in any water formation. In this simply ways we can help save our environment.
