Universidad de Zamboanga  
Zamboanga City

The key factor in saving the environment is cleanliness like for example, proper disposal of garbage and other waste material. Another way is taking care of our sea and marine life. Our fisherman should avoid using dynamite and other explosive or poison so that our sea product will not be totally destroyed.

Cutting of big trees and the preservation of our forest should be maintain in order to avoid calamities like flood which always bring destruction to the community and provinces in big cities smoke bleaching have polluted the air, so that residence should take a vacation to provinces or country side to enjoy fresh air. Our environment must be given priority by the govern, because clean environment will result to healthy people. To perform the task in tracing care of the environment is an obligation for the government and the citizens.
