

How to Save the Environment

Kathy Sabturani

Bachelor of Science in Radiologic Technology

School of Allied Medicine

Universidad de Zamboanga

Zamboanga City, Philippines

Well, as of now our environment is full of pollution because of the vehicles and other sources that emits too much smoke and gases thus, the ozone layer of the earth is greatly affected. So, how to save our environment first we have to keep our surroundings clean. We are not to throw and dump garbage anywhere just like the saying, "Your garbage, Pick them and throw them in the right place." We need to segregate our garbage into biodegradable and non-biodegradable.

As I have observed in our country, loads of garbage are dumped everywhere and many vehicles emit black smoke. There are also factories that emit chemicals that affect the ozone layer. To save our environment we should avoid using chemicals and throw garbage anywhere. Some waste materials can be recycled like old newspapers which can be transformed into baskets and many others. Plastics can be used to make decorations and transformed into art.
