Zamboanga City

Saving our environment is not easy it needs a cooperation of each individual we must separate biodegradable for non biodegradable, throw garbage in proper place, we must clean the environment so that calamity will be control. Replace cut down trees in the forest, make a project that will help the environment to be save like cleaning program, fund raising to earn money to buy necessary materials for the said project.

Do not abuse the nature gave by god used it in a proper way, and re-cycle is possible. Clean those polluted lakes, rivers and seas we should revived it, so that the next generation may see the beauty of the environment.

Including the animals that is endangered protect them by isolating in a place where they are safe and free from harm. These where they can multiple and unmultiple so they will be preserved, implement rules to protect the endangered animals, because they are also part of an environment.
