

Save the Earth

Reanne Mae V. Bayona
Bachelor of Science in Nursing
School of Allied Medicine
Universidad de Zamboanga
Zamboanga City, Philippines

God made the earth for us to have a place to live and placed everything on it for us to live and survive. Great minds invented great things and these inventions improved as many years had passed. But as technology improved and made our lives comfortable and easy, this lead now to the destruction of the earth. Some people are not aware of the status of the earth. Right now, calamities happen, disease is spreading, pollutions are everywhere and if something bad happens, people blame Mother Nature. The destruction of earth is mad by man but it can be prevented if we make a move to solve it. We can start planting trees to help protect the ozone layer.
