Universidad de Zamboanga
Zamboanga City, Philippines

Earth is what we call home. It is where trees, animals, flowers and other living things live. But what if our Mother Earth will suddenly be endangered and unprotected? Every day we hear news on television and radio about our planet. Reports tell us that wildlife and forests are disappearing at an alarming rate. Newspapers and even internet lament the pollution of our air, water and soil. How can we help our timely response to this alarming state of the only planet we live in, by doing our own share of protecting her with doing simple things that will surely stir big difference.

Here are some examples that I can share for us to save mother earth. One, do not allow anyone to free colorful balloons. For balloons that escaped the grasps of your hand will get into the oceans and seas will be mistaken as yummy jellyfish by sea turtles. Some of the sea turtles got killed by eating balloons or plastic bags. Sea turtles are part of the delicate cycle and if their population is affected other marine creatures are also under threat. Two, let us do our share not to be part of the problem or should I say part of the garbage problem. Learn to reuse, recycle and reduce. Recycle things to conserve resources, collect old newspapers, books, magazines, used papers, bottles (plastic and glass) and any other things that you could sell in junkyards. There is money in garbage and at the same time we do recycle things. Three, we should be responsible with our own wastages. Even at home or at school. Throw garbage in their proper waste cans. You may also try to use segregation scheme with your trashes. Separate biodegradable from non-biodegradable wastes as fertilizers in your garden.

These are just some of the things we can do to save mother earth. There are lots more that we can do and share. As for me I will help educate my friends and family on how to save the earth, so that we can enjoy all the benefits earth can give. So let start now to save mother earth.
