

Saving Mother Earth

Verna A. Lacuata

Bachelor of Science in Nursing

School of Allied and Medicine

Universidad de Zamboanga

We are very lucky to have our natural resources in our Mother Earth. From the river we can get fresh water and fishes for our consumption. But then people are careless. They throw garbage into the water that causes water pollution. Fishes die due to lack of oxygen and poisons caused by garbage throw into the water. Dynamite fishing destroys the coral reefs and kills life thriving in seas and oceans.

Aside from the bodies of water, illegal loggers are cutting down trees that cause flood and landslide. It is a major source of typhoon in our country. We should encourage people to dispose their garbage properly and start planting trees. For dynamite fishers, they should be arrested same with illegal loggers. We are the ones who benefit from our mother earth so we should protect, respect and love Mother Earth.
