

Saving our Earth

Jennifer L. Alfaro

Bachelor of Science in Nursing

School of Allied and Medicine

Universidad de Zamboanga

The earth is the planet where we live and just like our home we need to take care of it for the next generation. As a simple citizen, there are simple things that we can do to save mother earth like segregating our own garbage. There are methods like recycling plastic bottles and those decaying materials and utilized as fertilizers. Even a student nurse can include her health feeding about proper waste disposal and the diseases that they may get from garbage that are thrown on bodies of water. Burning will also cause air pollution that destroys the ozone layer that protects us from the sun's ultraviolet rays. Nowadays, we experience unpredictable weather forecasts. Conserving energy is also one way of preserving mother earth. Likewise, we must plant trees to reduce the carbon dioxide component in the air. As students, we can volunteer in planting trees and become a member of concerned citizens.
