

## **HOW TO PROTECT OUR ENVIRONMENT**

Vanessa D. Selga  
Associate in Radiologic Technology  
School of Allied Medicine  
Universidad de Zamboanga  
Zamboanga City, Philippines

Before our ancestors they protect, love and care our environment they trait it a one of the greatest gift from almighty Father. Before we smell fresh air and clean environment.

Nowadays, as we can see in our environment surrounding it is so big different before because our environment today is very dirty. That is because of the some people they throw their garbage anywhere. Some of them they don't care our environment and because of that we cannot smell fresh air and a clean surrounding, not just like before we can smell fresh air and swim to the river anytime we do.

As we can see today in our sea creatures some of them will die because of the polluted water and this is because of people. They don't think of what will happen in our environment if they throw their garbage at the river or anywhere. To those people who's work was illegal loggers if they cut trees then if there's a calamities to come the land will fall down to the people who live near the hills.

As a student we need to protect and care our environment because this is a gift fr4om our almighty father we need to treasure it, we need to discipline ourselves even though you're a rich person or poor everyone of us has a responsibility to protect our environment so that our next generation will follow of what are we taking care our environment.
