HOW TO SAVE ENVIRONMENT

For me to save our environment , people must be aware about the problem in the community or environment . One solution to be aware of is health teaching for every individual about environmental sanitation , also it should start ourselves to have discipline by not throwing their garbage in the river , burning some plastics and throwing plastic in the ocean.

Throwing garbage in the river is one cause of water pollution and we all know some people throw not only their garbage but also their urine also their dispose their sewage in the river burning plastic can cause thicken of the ozone layer and throwing plastic in the ocean is one cause why coral reefs destroy or being damage.

We can all avoid throwing garbage in the river , we can avoid burning plastic and we can also avoid throwing plastic in the ocean to save our environment and also our health.
