HOW TO SAVE THE ENVIRONMENT

Saving the nature in this new era plays vital contribution to remedy the massive destruction of the earth in general. The question how an individual will actualize saving the environment? Many ideas and thoughts have uttered, books published and expertise utilize but why it is the people still problem simply in our own ways of saving the environment. Planting trees in fertile land, segregation of biodegradable and non- biodegradable waste, being a responsible human being is what we need to promote the environment.

By mere of collective manpower to do this aim can eventually help preserving the essence of mother earth the population is huge why not invite every people in whole globe participate the saving of mother earth. People in jurisdiction should focus its attention in presenting the reality of today's condition of the earth. The catastrophes, calamities, tsunami, sudden earthquake these all circulating in the globe because of man negligence and carelessness we are entitled to be as rational human being but why we seem today's we should work hand in hand to save the environment if not revenge of mother earth is a kill. Work now, wake up blind minds.
