HOW TO SAVE THE ENVIRONMENT

One of the problem that we are facing now aside from poverty is environmental problem. Global warming is the result of our destruction of the environment. If we will not save our environment, we will live longer.

There are a lot of factors that could destroy our environment such as illegal logging, improper garbage disposal, burning of plastic, smoke from the factory and using unleaded gas. If we will not stop this, we will continuously experiencing floods, we will inhale polluted air which may destruct our respiratory system, drinking contaminated water and yearly calamities one evidence is the bagyong “ondoy” it killed hundreds of people and destructed heir houses and earnings. We could prevent such calamity if we will start planting trees disposing our garbage properly by separating the biodegradable.
