HOW TO SAVE THE ENVIRONMENT

Nowadays people don't care anymore about their environment. They don't even bother to give time on it. As we can see our environment are much polluted. Both land and body of water, as well as the noise pollution. Since we are living in this mother earth we should be aware to save our environment. As Filipino who lives in this planet we must learn to love our place and learn to our mother planet that sustains life to us.

As we observed people of today's practicing kaingin like cutting the trees, that results to flash flood, mad erosions and many others that cause many lives to give off. some are also disposing their garbage not in a proper place and so those garbage's that result to global warming that destroy the layer of our atmosphere like the ozone layer that protect us from the rays of ultraviolet radiation.
