HOW TO SAVE NVIRONMENT

Our environment are now changing , most problem nowadays some other country are now experiencing floods or even our beloved country, we also experience earthquake and the earth is now become warm and warmer. Perhaps people do changing the atmosphere by means of inventing cars and other machines, other also tend to cutting down forest and burning the wood in which it will actually increased the amount of greenhouse gases released into the atmosphere. This might lead to global warming. Aside from that burning and cutting trees some other country build factories and chemical plants that can cause pollutions, some also throw garbage everywhere, most specially to sees and rivers. But all of these problem have their own solution there a lot of rays to salve these problem. Each of us must help to clean our environment to avoid any other calamities.

Instead of cutting the trees we should be plant more trees perhaps trees can actually helps to prevent global warming . burning less wood, coal ,oil and natural gas can also help to stop global warming. Aside from that recycling can actually reduce pollutions.
