Environment refers to the surrounding, the circumstances, condition, or things around and individual that we refer to the natural environment is contrasted with the build environment, which comprises the areas and components that are strongly influenced by humans. The factors that really affect the environment and the most common example for this are that pollution coming from vehicles, factories and the use of Styrofoam or plastic that we burn. These destroy the atmosphere were the rule of ozone layer is to protect us or collects, absorbing harmful ultraviolet radiation for the sun that we should to avoid but we humans are responsible for the destruction of the environment resulting to global warming.

How can we save our environment it is in our won hand, we should to avoid the entire factor that affect that can destroy our environment by reducing of cutting the trees not using of plastic. If there are plastic bottles and other stuff relative to it, we can just recycle it.

We need to act upon them now before everything will be too late. We should stop burning plastics and stop cutting trees. Or else the effect will become irreversible.
