In our daily life, we also encounter chemistry, chemistry makes our life easier through the presence of the technology, we make our work easier and fast, we can save out time but even we have this we become worst, because technology is also a disaster in our life. We need to take or use in a proper way the technology and do not abuse it. We should help our mother earth for us to be successful and harmoniously in our daily life.

Like what the old folks said practice the old style, we must have discipline ourselves; by simple avoid throwing garbage at sea. Do not just be human being but human doing, contribute in your country positively by simply helping other people.
