School of Allied and Medicine

Universidad de Zamboanga

Zamboanga City, Philippines

In order for us to survive in this challenging world, let us prioritize the saving of our environment. Let us put in habit the cleanliness and orderliness of our surroundings. In doing so, let us start it in ourselves, in our homes, than in our community and throughout the world.

To save the environment, we must know how to start and to put in practice for us to achieve the main goal. To start with, we must know how to throw our own garbage buy let us segregate the non-biodegradable from the biodegradable. We must take care of our forests, animals and all natural resources which help us maintain the freshness of air we breathe, the water we drink, the food that we eat and all other living things as well the non-living things. Let us plant trees to avoid the denudation of forest which causes the flood, soil erosion, and other calamities that causes the destruction of our surroundings and environment. There are lots of things that we need to learn to save the environment.

Since our environment is a gift from our Almighty God, then it is our responsibility to take care of it as we take care of the creations of God.
