

## **How to Save the Environment**

Faiza S. Abil

Bachelor of Science in Nursing

School of Allied and Medicine

Universidad de Zamboanga

Zamboanga City, Philippines

Nowadays, technology is improving vividly. Many inventions beyond are also destroying mother earth. Many people are destroying the forest to earn money while others throw garbage on rivers and oceans that is why our waters are dirty. If there is a calamity who will suffer? We are all to pay for all the wrong we have made.

To avoid this, we should help each other to clean our rivers and oceans, encourage the people to stop throwing their garbage especially those who live near and on waters beds. We should also start planting trees to replace the ones that were destroyed.
