Environment? Environment is everywhere, it is about the surrounding that comprises the people and talking about this is a place where you want to live at. So, that's the point that we will be tackled about right now.

As we take a glimpse outside the classroom, we can observe that the ambiance is neat, silent but as we feel the temperature of it, it is warm, warmer than the early years. Going back to a century our world specifically our country have lots of natural resources like trees which help us in the calamity such as flood. Rivers, lakes and other water resources is so clean and clear but nowadays some uneducated and educated people throw garbage's in it and so if disasters happened the trashes that they threw will go back to them and worse than they did. Because of the immoral doings such as burning plastics instead of recycling it and using sprays that damaged our ozone layer the protective covering of the mother earth, we can noticed that as we walk in the town with our friends and classmates the rays of the sun that strikes our skin is so painful and it can cause skin cancer and with this environment is so hot.

In some places here in the Philippines there are also beautiful spots that we can hang out, bonding at, and enjoy our moment or summer vacation with our families or even love ones like Boracay, Palawan, Dakak, and other nice view of Chocolate Hills, Rice Terraces and the perfect cone of Mayon Volcano at Albay. We also have seven wonder of the world like Taj Mahal, the mosque that is build for his beloved woman. It calls wonder because of its fascinating beauty, cleanliness, nice view of the place and the history behind it that attracts people even foreigners.

The best thing in choosing environment where to live at is to consider the peace and order of the community, trouble-free surrounding where you can live harmoniously and friendly neighbors.
