### Disaster

As what we experienced nowadays, our environmental surroundings are now dealing with a lot of problems such as calamities, pollution, and others that can really affect our health and economic growth. Have we ever wondered the things that might happen to us if we won't do something for the betterment of ourselves? Not only the people in the present will be affected, even the next generation will suffer as well.

Our natural resources are full of life then, but now, there are only few left that we can be proud of because most of it have been destroyed by other people for their living but they didn't think what might be the result. They didn't even realized that we will be affected to any disaster that it will cause.

How many times did we hear of our co-Filipino experienced flood, landslide, earthquake, and other calamities especially in urban areas? They were really pathetic because most of them lost their property especially their loved ones. We must do something for the betterment of ourselves, give love to each other and be contented of what we have.

We also experience pollution in different places where factories, transportation, and others where in we can get something bad that will affect our health. As a person, I will do my best so that I can help in a simple way and I hope also that the government officials will find ways to avoid such environmental dilemma.
