ENVIRONMENT

What does environment refer to? Environment refers to an area in which something exists or lives. What can we see in our environment? Of course, we can a lot of different organisms that exist in this particular area; they may be both living and non-living organisms. Man is one of those living organisms that we can see in our environment. So, what's our purpose in existing in this particular area? Do we have to protect and take good care of it or to destroy it?

Nowadays, we can see lot of garbage that scattered in our environment and we can only see few trees that grow. What do you think is the cause of this? We, people living in this so called environment have the obligation to protect our wonderful environment that God has given us. But are we doing it? As I can see nowadays, we are no longer doing it; instead we are putting our Mother Earth on danger. A lot of natural phenomenons are happening today such as flash floods, earthquake, landslide, etc. Why? Because instead of protecting and conserving our natural resources like trees, we are destroying it.

So, as a student we have to contribute our knowledge in building a new and peaceful environment. We have the obligation to help one another in keeping our environment "a clean and green environment."
