The environment gives beauty to this world. In the past, the environment most probably here in the Philippines is clean. The people are well responsible to have their environment clean. The environment in the past can give fresh air, no bad pollution and can't give harmful effects to the people.

Today, our environment can no longer clean and the government doesn't pay any attention to our environment and the people today are very irresponsible. Our environment today can no longer gives beauty unlike to our past environment. Maybe for some people they can appreciate it. But did they think that the air they breathe is not polluted by many of the pollutions that the environment can produce now a day? Today, the environment can affects our health.
