Zamboanga City, Philippines

Environment is our surrounding which includes everything from a non living to a living being. There are two kinds namely the natural environment and built environment. A natural environment it is one that has natural existence and the built is one that man is responsible for, like the domes cities and etc. The natural atmosphere is being polluted due to unnatural factors. While natural causes like volcano have its own twin in causing pollution.

It is the man made one's that are rampart. It is the reckless and the caustic human nature that is primarily responsible for the environment pollution. It is the self-centered human that are causing more destruction to the environment. It is natural for every human being to live in the circumstances they are born and any changes to it causes a lot of trouble. Built environment which lacks natural components, has become quite significant in today's era.

There is a lot of environmental serial that has been responsible for the problems associated with mother earth like global warming, land divagation pollution and climate change. The growth in pollution and also the economic advancement has added to pollution as well. It is the responsibility of every person in checking the causes that affect the environmental disaster and play an important role. One must read the importance of a healthy environment and that it is for his own benefit to protect it and to take measures to make the world clean and green because as the proverb says "We won't have a better society if we destroy the environment".
